

Pharmaceutical & Medical Device Industry Assembly & Test

TQC Medical has specialised in the design and manufacture of equipment for the Pharmaceutical and Medical Device Industry for over 20 years. Combining our experience in assembly technology, production test equipment and process automation, **TQC** is able to offer complete solutions tailored to the specific needs of its customers.

Automated Assembly

The range of equipment supplied stretches from simple desk top fixtures to fully integrated systems including Robotics and pallet conveyors.

TQC has now completed several projects involving GAMP4 and 21 CFR Pt 11. Typical machines include high speed leak testing, machines for handling radiopharmacy and work on radiosterilising plant.

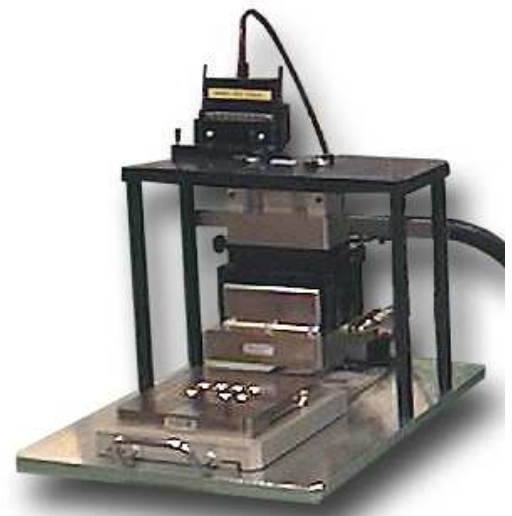

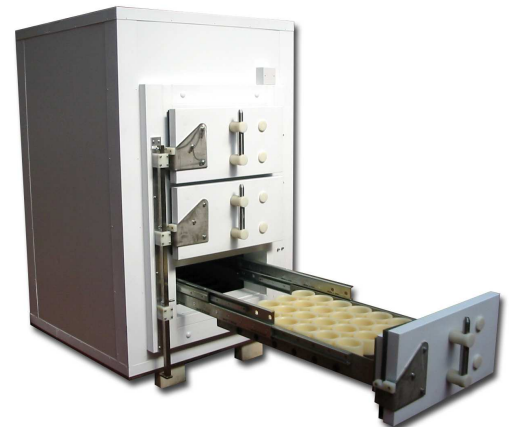

Leak Testing

TQC is the sole UK agent & system manufacturer for a Swedish based range of leak test instruments. The latest Nolek S9 series is a range of configurable leak test instruments that are integrated into **TQC's** standard range of leak test machines. **TQC** also has experience with high speed helium leak testing.

Design, Development & Consultancy

TQC Medical has advised a number of clients about the design of their product with respect to automated manufacture.

In addition **TQC Medical** provides practical engineering consultancy for feasibility studies, process validation and engineering investigations

Pharmaceutical & Medical Device Industry

Assembly & Test

Types of Product handled include -

- Inhalers
- Diagnostic Devices
- Medical Filters
- Blister Packs
- Vials (Phials)
- Surgical Equipment
- Swallowable Cameras
- Catheters
- Radio-actives
- Wound Dressings
- Contact Lenses
- Intra-Vascular Devices

Types of Equipment supplied include -

- Linear platen transfer systems
- Rotary indexing table solutions
- Single station test machines
- PLC / PC controlled systems
- Robotics
- Pick & Place Technology
- Assisted Lift Units
- Low Temperature Storage
- Turnkey Automated Assembly
